

# Newsletter

**This week at Carrum we have heralded the arrival of our new pullets, being cared for by our students.**

*They are not ready to be integrated with our main flock, so will spend time as a group until they settle in. Thank you to all the students who have taken an interest in them and their comfort.*

*We have had a bleak week in the garden, with much soft fall being shifted by our senior students (in the drizzle!) to our playground areas. We have received the first of three quotes needed regarding our **new solar panels** and will make a decision as soon as the other two quotes are*

*received. It is very exciting to hear of the savings we can make as a school and a community with this addition to our green energy strategy.*

*Our waste continues to diminish with the amount of bins we put out for council collection further reduced this week. It is really heartening to see the efforts our students put into waste separation and recycling - thank you parents as well for*

**Grade 5/6  
Interschool Sport

More Dates](#)

using **wrapper free options** for your children's lunches.

Finally, a reminder that during the winter months, appropriate clothing is advisable for all children. We still have many students arriving at school with no jumper or jacket during the chilly winter season. Hats, gloves and scarves in school colours are a great option. We can reduce the amount of heating we need if our students **come prepared for the weather!**

Best regards,  
Mandy Carmichael  
Assistant Principal

## ***They're Back .....***

Dear Parents/Guardians/Carers,

It has come to my attention that some students in the school may have head lice and I seek your cooperation in checking your child's hair this weekend.

Head lice do not transmit infectious diseases – they are transmitted by having head to head contact with someone who has head lice. You may be reassured to know that head lice are commonly found in places other than at Carrum Primary School. Head lice are common in school-aged children and are the most adaptable of creatures. They have survived living solely on humans for 10,000 years!!!!

### What can you do?

I seek your cooperation in checking your child's hair and in those instances where head lice or eggs are found, treating your child's hair.

Please see the attached pamphlet *Treating and Controlling Head Lice*, from the Department of Human Services. This pamphlet has informative guidelines regarding detecting and treating head lice and eggs.

### How do I treat my child for head lice?

The attached pamphlet (as noted above) has informative guidelines regarding detecting and treating head lice and eggs. The school also has additional information available regarding treatment and controlling head lice. Please don't hesitate to contact the office on, 97723471 to obtain this information.

### If head lice or eggs are found on your child's hair you need to inform:

- the school and advise when the treatment has started, via the attached *Action Taken Form*.
- parents or carers of your child's friends so they too have the opportunity to detect and treat their children if necessary.

### When can my child return to school?

Health regulations requires that where a child has head lice, that child should not return to school until the day after appropriate treatment has started. Please note, this refers only to those children who have live head lice and does not refer to head lice eggs.

Carrum Primary School is aware that head lice can be a sensitive issue and is committed to maintaining your confidentiality.

Kind regards

Clem Langford

21/6/18

# Treating and controlling headlice

health

While children are at school many families will have contact with head lice. The information contained here will help you treat and control head lice.

## Catching head lice

Head lice have been around for many thousands of years. Anyone can get head lice.

Head lice are small, wingless, blood sucking insects. Their colour varies from whitish-brown to reddish-brown. Head lice only survive on humans. If isolated from the head they die very quickly (usually within 24 hours).

People get head lice from direct hair to hair contact with another person who has head lice. This can happen when people play, cuddle or work closely together.

Head lice do not have wings or jumping legs so they cannot fly or jump from head to head. They can only crawl.

## Finding head lice

Many lice do not cause an itch, so you have to **look carefully to find them**.

Head lice are found on the hair itself and move to the scalp to feed. They have six legs which end in a claw and they rarely fall from the head. Louse eggs (also called nits) are laid within 1.5 cm of the scalp and are firmly attached to the hair. They resemble dandruff, but can't be brushed off.

Lice can crawl and hide. The easiest and most effective way to find them is to follow these steps:

**Step 1** Comb any type of hair conditioner on to dry, brushed (detangled) hair. This stuns the lice and makes it difficult for them to grip the hair or crawl around.

**Step 2** Now comb sections of the hair with a fine tooth, head lice comb.

**Step 3** Wipe the conditioner from the comb onto a paper towel or tissue.

**Step 4** Look on the tissue and on the comb for lice and eggs.

**Step 5** Repeat the combing for every part of the head at least four or five times.

If lice or eggs are found, the hair should be treated.

If the person has been treated recently and you only find empty hatched eggs, you may not have to treat, as the empty eggs could be from a previous episode.

## Treating head lice

Treating head lice involves removing lice and eggs from the hair. There are two ways you can do this:

1. Buying and using a head lice lotion or shampoo, following the instructions on the product
2. Using the conditioner and comb method (described under 'finding head lice') every second day until there have been no live lice found for ten days.

If you choose to use a head lice product always read and follow the instructions provided with the product carefully. The following points may also be helpful:

- Head lice products must be applied to all parts of the hair and scalp.
- No treatment kills all of the eggs so treatment must involve two applications, seven days apart. The first treatment kills all lice; the second treatment kills the lice that may have hatched from eggs not killed by the first treatment.
- Cover the person's eyes while the treatment is being applied. A towel is a good way to do this.
- If you are using a lotion, apply the product to dry hair.
- If you are using a shampoo, wet the hair, but use the least amount of water possible.
- Apply the treatment near the scalp, using an ordinary comb to cover the hair from root to tip. Repeat this several times until all the hair is covered.

There is no need to treat the whole family - unless they also have head lice.

Concentrate on the head - there is no need to clean the house or the classroom.

Only the pillowcase requires washing - either wash it in hot water (at least 60°C) or dry it using a clothes dryer on the hot or warm setting.

## Testing resistance

Head lice products belong in one of the following categories depending on the active compound they contain:

- pyrethrins
- synthetic pyrethroids (permethrin, bioallethrin)
- organophosphates (maldison or malathion)
- herbal with or without natural (non-chemical) pyrethrins.

Insecticide resistance is common, so you should test if lice are dead. If they are, treat again in seven days using the same product. If the lice are not dead, the treatment has not worked and the lice may be resistant to the product and all products containing the same active compound. Wash off the product and treat as soon as possible using a product containing a different active compound. If the insecticide has worked, the lice will be dead within 20 minutes.

Any head lice product could cause a reaction and should be used with care by women who are pregnant or breastfeeding, children less than 12 months old and people with allergies, asthma or open wounds on the scalp. If you are unsure, please check with your pharmacist or doctor.

## Head lice combs

Combs with long, rounded stainless steel teeth positioned very close together have been shown to be the most effective, however, any head lice comb can be used.

## Head lice eggs

Head lice eggs are small (the size of a pinhead) and oval. A live egg will ‘pop’ when squashed between fingernails.

Dead eggs have crumpled sides and hatched eggs look like tiny boiled eggs with their tops cut off.

## Regulations

According to the Public Health and Wellbeing Regulations 2009, children with head lice can be readmitted to school or children’s service centres after treatment has commenced.

The department recommends a child with head lice can be treated one evening and return to school or children’s service centres the next day, even if there are still some eggs present. There is no need to miss school or child care because of head lice.

## Preventing head lice

Check your child’s head regularly with comb and conditioner. There is no research to prove that chemical or herbal therapies can prevent head lice.

## CHELSEA BASKETBALL ASSOCIATION

Did you know that at Chelsea basketball stadium we have more than just basketball for juniors and seniors, we want to be part of the community and therefore we are looking to deliver more programs for all ages and levels of skill.

**Walking Basketball** – For the elderly, easy pace, low rings and low impact and refreshments

**All Abilities** – A program designed for people with varying needs who attend funded disability organisations

**Baby Ballers** – Designed for kindergarten kids, learn the fundamentals and be ready for the next stage

**Aussie Hoops** – For kids between the ages of 5-12 years old and are complete beginners

**Netball** – Played throughout the week

**Badminton** – Played on a Thursday morning and for any ages

**High Skill training** – For the advanced basketball player wanting to work hard on their skills and enhance their ability

**Shooting skills** – To improve your basketball shooting fundamentals

**PT classes** – During the week, designed mainly for at home parents

*For any information on the above please email [manager@chelseabasketball.com.au](mailto:manager@chelseabasketball.com.au)*

**Also ask us about our domestic, junior representative and Big V basketball and try-outs**

# PARENTING RESILIENT KIDS

We are inviting parents and their primary-school aged children to take part in a new online parenting program designed to provide parents with strategies to parent with confidence and stay connected with their pre-teen child.

## WHAT IS THE RESEARCH ABOUT?

You are invited to participate in research being conducted by Monash University, led by Dr Marie Yap. The research aims to evaluate whether our new online parenting program can help empower parents and in turn build their child's resilience.

## WHAT IS INVOLVED?

You will be randomly allocated to one of two groups, to receive either:

- 1) An individually-tailored, interactive online parenting program that will give you practical strategies you can use to parent your child more confidently;  
OR  
2) An information package of 6 weekly factsheets about child development and well-being.  
We will give you a 5-minute call once a week until you have completed your allocated program.  
We will ask both you and your child (if they agree to take part) to complete some online surveys at the beginning, and after 3 and 12 months.

In total, participation in this research will take a few hours of yours and your child's time over 12 months. To say thank you, you will be reimbursed with e-gift vouchers.

All components of the online program can be done using a computer, tablet, or smartphone.

## WHO CAN PARTICIPATE?

Parents or guardians of a child aged 5-11 who live in Australia, are fluent in English and have internet access.

## HOW DO I FIND OUT MORE?

To find out more, or to register to participate, please go to [www.parentingresilientkids.com](http://www.parentingresilientkids.com)

For further details, please contact the researchers at [need-resilientkids@monash.edu](mailto:need-resilientkids@monash.edu) or on (03) 9905 1232.
